Research Summary

Enriched boric acid refers to boric acid that has been refined or processed to increase its purity or concentration of certain isotopes. Boric acid is a weak acid composed of boron, oxygen, and hydrogen, and it occurs naturally in volcanic steam and hot springs. Enriched boric acid may contain a higher concentration of a specific boron isotope, such as boron-10 (B-10), which has unique properties that make it useful in various applications. For example, enriched boric acid containing B-10 is commonly used as a neutron absorber in nuclear reactors to control the rate of fission reactions and prevent runaway reactions. Additionally, enriched boric acid may be used in medical imaging and radiation therapy, as well as in the production of specialty glasses, ceramics, and semiconductor materials. The enrichment process typically involves isotopic separation techniques such as fractional distillation, ion exchange chromatography, or chemical precipitation to isolate and concentrate the desired boron isotope. Enriched boric acid plays a critical role in a wide range of scientific, industrial, and technological applications, where its unique properties contribute to advancements in various fields.

The major global manufacturers of Enriched Boric Acid include 3M, Stella Chemifa, Dalian Boronten Sci&Tech, NHTC, Liaoning Honghao Chemical, Heavy Water Board (HWB), Shandong Chengwu Yixin, etc. The global players competition landscape in this report is divided into three tiers.
