### Research Summary

Enteral feed devices are specialized medical instruments used to deliver liquid nutrition, medications, and fluids directly into the gastrointestinal tract of patients who cannot consume food or fluids orally. These devices are often employed in cases of severe illness, surgery, or conditions where the normal digestive process is compromised. Enteral feeding is typically administered through a tube, which can be inserted through the nose (nasogastric or nasoenteric tube), through the abdominal wall (gastrostomy or jejunostomy tube), or via a surgically implanted device. Enteral feed devices provide a reliable and controlled means of delivering essential nutrients and medications to maintain the nutritional status and overall health of patients who are unable to eat or drink conventionally.

The major global manufacturers of Enteral Feed Device include Fresenius Kabi, Danone, Cardinal Health, Nestle, Avanos Medical, B.
