### Research Summary

Enteric empty capsules are pharmaceutical or dietary supplement capsules designed with a special coating that allows them to pass through the acidic environment of the stomach intact and dissolve in the alkaline conditions of the small intestine. This delayed release helps protect sensitive medications, supplements, or their active ingredients from stomach acid, ensuring they are absorbed in the intestines and not broken down prematurely. Enteric capsules are often used for substances that may cause irritation or degradation in the stomach, such as certain medications or probiotics, and are especially useful for drugs requiring targeted release or to minimize side effects associated with stomach exposure.
