Research Summary

An environmental site assessment (ESA) is a comprehensive evaluation conducted to assess the environmental condition of a property or site. It involves thorough research, field investigations, and data analysis by environmental professionals to identify potential environmental risks, liabilities, and concerns associated with past and present activities on the site. The assessment typically includes a Phase I investigation, which reviews historical records, conducts site inspections, and evaluates adjacent properties to identify recognized environmental concerns (RECs). If potential concerns are found, a Phase II investigation may follow, involving soil and groundwater sampling to further assess contamination. The findings are documented in a report that summarizes the environmental conditions, identifies risks or liabilities, and provides recommendations for further action, such as remediation or mitigation measures. Environmental site assessments are often required for property transactions, development projects, and regulatory compliance purposes.

The major global suppliers of Environmental Site Assessment include T?V Rheinland,
