Research Summary

Environmentally friendly fluorinated fire extinguishing agents refer to fire suppression chemicals designed to extinguish fires while minimizing environmental impact and health hazards associated with traditional fluorinated extinguishing agents like perfluorinated compounds (PFCs). These environmentally friendly alternatives are formulated to provide effective fire suppression properties without the use of persistent organic pollutants (POPs) or substances that contribute to ozone depletion or global warming. Examples of environmentally friendly fluorinated fire extinguishing agents include fluorotelomer-based compounds, hydrofluoroolefin (HFO) blends, and fluorinated surfactants with improved biodegradability and lower toxicity profiles compared to conventional PFCs. These agents are used in various applications such as fire extinguishers, firefighting foam, and fire suppression systems in sensitive environments like aircraft, data centers, and industrial facilities where environmental concerns are paramount. By choosing environmentally friendly fluorinated fire

extinguishing agents, organizations can effectively combat fires while minimizing their ecological footprint and ensuring compliance with environmental regulations.
