Research Summary

EP (Electrophysiology) catheter ablation is a medical procedure used to treat certain heart rhythm disorders, such as atrial fibrillation, atrial flutter, or ventricular tachycardia. During this minimally invasive procedure, thin, flexible catheters are inserted into the heart through blood vessels, typically via the groin or neck. These catheters contain electrodes that can deliver controlled radiofrequency or cryotherapy energy to the specific areas of the heart responsible for abnormal electrical signals or arrhythmias. The energy is used to create localized lesions or scars in the heart tissue, disrupting the aberrant electrical pathways and restoring normal heart rhythm. EP catheter ablation is often considered when medication alone is not effective in managing rhythm disorders or when the side effects of medications are intolerable, offering the potential for long-term relief from recurrent arrhythmias.

The major global manufacturers of EP Catheter Ablation include Johnson & Johnson, Abbott, Medtronic, Boston Scientific, Biotronik, Japan Lifeline, OSYPKA, MicroPort EP MedTech, CardioFocus, etc. The global players competition landscape in this report is
