Research Summary

An EPB (Electric Parking Brake) motor is a key component of an electric parking brake system used in modern vehicles. Unlike traditional handbrakes or foot-operated parking brakes, an EPB motor is an electrically actuated system that engages and disengages the vehicle's parking brake. It consists of an electric motor and a mechanism that applies and releases the brake pads or shoes on the vehicle's rear wheels. The EPB motor is controlled by an electronic control unit (ECU) and can be activated with the push of a button or automatically engaged when the vehicle is parked or turned off. This technology not only provides more precise and consistent braking force but also offers additional safety features such as hill-hold functionality and automatic release when the vehicle is in gear and the accelerator pedal is pressed. EPB motors contribute to improved driver convenience and enhanced safety in modern automotive systems.

The major global manufacturers of EPB Motor include ZF, Continental, Mabuchi Motor, Keyang Electric Machinery, Johnson Electric, CCL Motors, Ningbo Jingcheng Car Industry, Fulling & Ceiec, etc. The global players competition landscape in this report is divided into three tiers.
