Research Summary

Epoxidized Soybean Oil (ESO) is a renewable and biodegradable vegetable oil-based compound that has been chemically modified through a process called epoxidation. This process involves the introduction of epoxide groups into the soybean oil molecules, creating a product with enhanced chemical and physical properties. ESO is primarily used as a plasticizer and stabilizer in various polymer applications, particularly in the production of polyvinyl chloride (PVC) plastics. It improves the flexibility and durability of PVC materials and helps prevent degradation from heat, light, and oxygen exposure. Due to its eco-friendly and non-toxic characteristics, ESO has gained popularity as a safer alternative to traditional plasticizers containing harmful phthalates. It is used in a wide range of applications, including food packaging, medical devices, and toys, where safety and environmental considerations are crucial.

The major global manufacturers of Epoxidized Soybean Oil include Arkema, CHS, Galata Chemicals, The Chemical Company, American Chemical Service, Makwell Plasticizers Pvt. Ltd., AM Stabilizers, Changchun Corporation, Nanya Plastics
