Research Summary

An epoxy-encapsulated NTC thermistor is a type of temperature sensor consisting of a Negative Temperature Coefficient (NTC) thermistor encapsulated in epoxy resin. NTC thermistors are semiconductor devices whose electrical resistance decreases as temperature increases. In an epoxy-encapsulated NTC thermistor, the thermistor element is coated with a protective layer of epoxy resin, which provides mechanical support, insulation, and protection against environmental factors such as moisture, chemicals, and physical damage. This encapsulation process ensures the reliability and durability of the thermistor, making it suitable for use in various temperature sensing applications. Epoxy-encapsulated NTC thermistors are commonly used in temperature monitoring and control systems for applications such as automotive, HVAC (heating, ventilation, and air conditioning), appliances, and industrial equipment. They offer accurate and stable temperature measurements in a compact and robust package.
