### Research Summary

Epoxy thinner is a solvent specifically designed to dilute epoxy resin and epoxy-based coatings. It is used to adjust the viscosity or thickness of the epoxy mixture to achieve desired application characteristics such as flow, leveling, and penetration into substrates. Epoxy thinners can be formulated from various solvents such as acetone, alcohol, xylene, or specialized epoxy thinning agents depending on the specific epoxy resin formulation and application requirements. Thinning epoxy resin with a compatible thinner can make it easier to apply using methods like brushing, rolling, or spraying, especially in situations where a thinner coat or better penetration is needed. However, it is essential to follow manufacturer recommendations and safety guidelines when using epoxy thinners, including proper ventilation, protective equipment, and understanding compatibility with the epoxy resin system being used.

The major global manufacturers of Epoxy Thinner include Brillux, Smooth-On, Sydney Solvents, Vitex.gr, NEUCE, Startex Chemicals, TotalBoat, TA Paints, Norglass, AkzoNobel, PPG, Philadelphia Coatings LLC, Brillux GmbH, etc. The global players competition landscape in this report is divided into three tiers.
