### Research Summary

Equipment Front End Module (EFEM) is an integral component in the manufacturing processes of semiconductor and microelectronic devices. It is a highly automated and customizable system that interfaces with semiconductor manufacturing equipment, such as wafer processing tools and inspection systems, to ensure the efficient and contamination-free handling of wafers during production. EFEMs typically consist of robotic arms, load ports, wafer aligners, and various sensors. They facilitate the loading and unloading of wafers into processing chambers, wafer mapping, and inspection while maintaining clean and controlled environments to minimize particle contamination. EFEMs play a critical role in semiconductor manufacturing facilities, enhancing productivity, minimizing wafer handling errors, and ensuring the reliability and quality of semiconductor devices.
