Research Summary

An Escherichia coli (E. coli) online analyzer is a specialized instrument designed to continuously and automatically monitor water samples for the presence and concentration of E. coli bacteria. These analyzers are crucial for ensuring water safety in municipal water supplies, wastewater treatment plants, and industrial processes, as E. coli is a key indicator of fecal contamination and potential health risks. Using advanced detection methods such as fluorescence, colorimetry, or molecular analysis, the analyzer provides real-time data, enabling rapid response to contamination events. By automating the detection process, an E. coli online analyzer reduces the need for manual sampling and laboratory testing, improving efficiency and reliability in water quality management.
