Research Summary

An ESD (Electrostatic Discharge) protection diode, also known as an ESD diode or transient voltage suppressor diode, is a specialized semiconductor component designed to protect electronic circuits and devices from damage caused by electrostatic discharge events. These diodes are engineered to rapidly and safely divert excess voltage, such as that generated by static electricity or voltage spikes, away from sensitive components within an electronic system. ESD protection diodes have a low breakdown voltage, allowing them to conduct when the voltage exceeds a certain threshold, thereby shunting the excess energy away from the protected circuit. They are commonly used in various electronic applications, including integrated circuits (ICs), printed circuit boards (PCBs), and connectors, to safeguard against ESD events and ensure the reliable and long-lasting operation of electronic equipment.

The major global manufacturers of ESD Protection Diode include Vishay, On semiconductor, Toshiba, Texas Instruments, Littelfuse, Infineon, NXP, STMicroelectronics, BrightKing, Yint, Galaxy Electrical, SOCAI, LANGTUO, LAN
