Research Summary

An ESD-safe mat, also known as an electrostatic discharge (ESD) mat or anti-static mat, is a specialized workplace surface designed to prevent electrostatic discharge from damaging sensitive electronic components, equipment, or devices during assembly, testing, or repair processes. These mats are made from materials with electrical properties that dissipate static electricity safely and gradually, rather than allowing it to build up and discharge suddenly, which can damage electronic components. ESD-safe mats typically feature a conductive layer or grid that is connected to a ground source to help channel any static charges away from the work area. They provide a controlled environment for handling electronics, protecting against potential electrostatic discharge, and ensuring the integrity and functionality of sensitive electronic components and assemblies. These mats are commonly used in industries like electronics manufacturing, repair, and testing, where protecting against ESD is critical.

The major global manufacturers of ESD-Safe Mat include Desco (SCS), RS Pro, COBA Europe, Hozan, ACL Staticide Inc, Bertech, Achilles Industrial Materials, Hakko, Superior Manufacturing Group, Ranco Industries, Cleansem, SDM Technologies,
