Research Summary

An Ethernet gateway is a networking device that serves as a bridge or interface between different communication networks, allowing devices using different protocols or technologies to communicate with each other. In the context of Ethernet networking, an Ethernet gateway typically connects a local Ethernet network to another network or the internet. It acts as a translator, converting data between Ethernet frames and packets suitable for transmission over other network types such as Wi-Fi (wireless LAN), cellular networks, or wide-area networks (WANs) like the internet. Ethernet gateways are commonly used in homes, businesses, and industrial settings to enable connectivity between Ethernet-based devices (such as computers, printers, and servers) and other devices or networks using different communication standards. They play a crucial role in network integration, data sharing, and communication interoperability across diverse network environments.

The major global manufacturers of Ethernet Gateway include Adtran, Advantech, B&b Electronics, Cisco, Digi International, HP, Iogear, Juniper Netscreen, Linksys, Mellanox, MOXA, Netgear, Opendgear, Patton Electronics, Phoenix Contact, Planet, ZyXEL, etc.
