Research Summary

Ethernet switches are network devices used to connect multiple computers, devices, and network segments within a local area network (LAN). They operate at the data link layer (Layer 2) of the OSI model and play a fundamental role in efficiently managing the flow of data traffic within a network. Ethernet switches receive data packets from connected devices and determine the destination of each packet based on the MAC (Media Access Control) addresses of the devices. Unlike older network hubs, which simply broadcast data to all connected devices, Ethernet switches intelligently forward data only to the specific device or devices that need it, reducing network congestion and improving overall network performance. Ethernet switches come in various sizes and configurations, from small desktop switches for home or small office networks to large enterprise-grade switches with numerous ports and advanced management features. They are a cornerstone of modern networking, providing the essential infrastructure for building robust and scalable LANs in homes, businesses, and data centers.

The major global manufacturers of Ethernet Switches include DASAN Network

Solutions, ubiQuoss, Dayou Plus, Piolink, Samji Electronics, HFR, Syscable Korea, Soltech Infonet, Tellion, Inc, Handreamnet, etc. The global players competition landscape in this report is divided into three tiers.
