Research Summary

Ethyl formate is an organic chemical compound with the molecular formula $C_3H_6O_2$. It is a colorless and flammable liquid that has a sweet, fruity odor, resembling that of ripe pineapples or strawberries. Ethyl formate occurs naturally in certain fruits and is used in the food industry as a flavoring agent and food additive, contributing to the aroma and taste of various food products. It is also employed as a solvent in various applications, including the production of varnishes, lacquers, and perfumes, as well as in the extraction of essential oils from plant materials. Ethyl formate has applications in pest control as a fumigant for the fumigation of stored grains and agricultural products, and it has been investigated for its potential use in organic synthesis and as an alternative to ozone-depleting fumigants.
