Research Summary

Ethyl polysilicate, also known as ethyl silicate, is a chemical compound with the formula $(C_2H_5O)_4Si$. It is a colorless and transparent liquid that contains silicon, oxygen, and ethyl groups. Ethyl polysilicate is used primarily as a binder or binder additive in the manufacturing of inorganic materials such as ceramics, glass, and coatings. When exposed to moisture or humidity, it undergoes hydrolysis, releasing ethyl alcohol and forming silica (silicon dioxide) as a solid binder. This property makes it valuable in various industrial applications, including as a binder in the preparation of refractory materials, investment casting molds, and as a consolidant in the restoration of historical and architectural structures. Ethyl polysilicate's versatility and ability to impart strength and stability to a wide range of materials make it a valuable component in various manufacturing processes and construction projects.

The major global manufacturers of Ethyl Polysilicate include Evonik, Wacker, COLCOAT, Momentive, Zhejiang Xinan Chemical, Nangtong Chengua Chemical, Zhangjiagang Longtai, YAJIE Chemical, Zhangjiagang Xinya, Zhejiang Zhengbang
