Research Summary

Ethyl silicate, also known as ethyl orthosilicate or tetraethyl orthosilicate (TEOS), is a chemical compound with the molecular formula $\text{Si}(\text{OC}_2\text{H}_5)_4$. It is a colorless and flammable liquid that contains silicon, oxygen, and ethyl groups. Ethyl silicate is primarily used as a precursor and binder in the manufacturing of inorganic materials, particularly in the production of silica-based products like ceramics, glass, and coatings. When exposed to moisture or humidity, it undergoes hydrolysis, releasing ethyl alcohol and forming silica (silicon dioxide) as a solid binder. This property makes it valuable in various industrial applications, including as a binder in the preparation of refractory materials, investment casting molds, and as a consolidant in the restoration of historical and architectural structures. Ethyl silicate's ability to impart strength, stability, and resistance to high temperatures to inorganic materials makes it a crucial component in a wide range of manufacturing processes and construction projects.

The major global manufacturers of Ethyl Silicate include Wacker, Silbond, Evonik, COLCOAT, Momentive, Zhejiang Xinan Chemical, Nantong Chenggang Chemical, Zhangjiagang LongTai Chemical, YAJIE Chemical, Zhangjiagang Xinya Chemical,
