### Research Summary

Ethylamine is a simple organic compound belonging to the class of amines. It has the chemical formula  $C_2H_5NH_2$  and consists of an ethyl group ( $-C_2H_5$ ) attached to an amino group ( $-NH_2$ ). Ethylamine is a colorless, flammable liquid with a strong, ammonia-like odor. It is highly soluble in water and miscible with most organic solvents.

Ethylamine is primarily used in the production of various pharmaceuticals, pesticides, and rubber accelerators. It also finds application as a precursor in the synthesis of other organic compounds and as a solvent in chemical reactions. Additionally, ethylamine is utilized in the manufacturing of dyes, textiles, and surfactants. Due to its reactive nature, proper handling and storage procedures are necessary to ensure safety.

The major global manufacturers of Ethylamine include Zhejiang Jianye Chemical, Zhejiang Xinhua Chemical, Shandong Hongda Biological, Eastman Chemical, Balaji Amines, Alkyl Amines Chemicals, BASF, Dezhou Dehua Chemical, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a

dominant industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
