### Research Summary

Ethylene Glycol Monostearate (EGMS), also known as glycol stearate, is a chemical compound derived from the esterification of ethylene glycol with stearic acid. It is a white, waxy solid or flakes with a range of industrial and commercial applications. EGMS is commonly used in the production of cosmetics, toiletries, and personal care products as an emulsifying agent and thickening agent. It helps to stabilize emulsions, preventing the separation of oil and water-based components in creams, lotions, and various beauty products. Additionally, EGMS can impart a smooth and creamy texture to these formulations, improving their sensory qualities and making them easier to apply. Its versatility and effectiveness in enhancing the quality and consistency of cosmetic and personal care products make it a valuable ingredient in the cosmetics industry.

The major global manufacturers of Ethylene Glycol Monostearate include Solvay, Croda, Galaxy Surfactants, BASF, Lonza, Stearinerie Dubois, Italmatch Chemicals, Mosselman, Innospec, Inolex, Jeen International (Vantage), etc. The global players
