### Research Summary

Ethylene Oxide Adduct (EOA) is a chemical compound formed by the reaction of ethylene oxide with another molecule or compound. Ethylene oxide is a highly reactive epoxide compound used in various industrial processes, including the production of detergents, plastics, and antifreeze. When ethylene oxide reacts with a substrate or molecule containing functional groups such as hydroxyl (-OH), amine (-NH<sub>2</sub>), or carboxyl (-COOH), it forms an adduct through an addition reaction. Ethylene oxide adducts can have a variety of applications depending on the properties of the starting materials and the conditions of the reaction. They are commonly used as surfactants, emulsifiers, and intermediates in the synthesis of various chemicals and materials. Additionally, ethylene oxide adducts are used in the manufacture of pharmaceuticals, personal care products, and agricultural chemicals. However, it's important to note that ethylene oxide is also a known carcinogen and poses health risks, so proper handling and safety precautions are necessary when working with ethylene oxide and its adducts.

The major global manufacturers of Ethylene Oxide Adduc (EOA) include Lotte Chemical, TSUKASA PETCO Corporation, etc. The global players competition landscape in this report is divided into three tiers.
