### Research Summary

Ethyleneamines are a family of organic compounds characterized by the presence of amine functional groups (-NH<sub>2</sub>) attached to an ethylene backbone. They are versatile chemicals with a wide range of industrial applications, including as intermediates in the synthesis of various chemical compounds. Ethyleneamines find use in the production of adhesives, detergents, textile additives, fuel additives, and in the petroleum and pharmaceutical industries. They are valued for their ability to act as chelating agents, complexing agents, and catalysts in chemical reactions. Ethyleneamines come in different forms, such as ethylenediamine (EDA), diethylenetriamine (DETA), and triethylenetetramine (TETA), each with its specific chemical properties and applications. Their versatility and reactivity make ethyleneamines important components in various industrial processes, contributing to the development of a wide range of products and technologies.

The major global manufacturers of Ethyleneamines include Akzonobel NV, Arabian Amines Company, BASF SE, Delamine BV, Diamines and Chemicals Limited, DuPont,

Huntsman Corporation, BASF SE, Tosoh Corporation, etc. The global players competition landscape in this report is divided into three tiers.
