### Research Summary

EV battery recycling services involve the collection, disassembly, and processing of used electric vehicle (EV) batteries to recover valuable materials such as lithium, cobalt, and nickel. These services aim to minimize environmental impact by diverting batteries from landfills and reducing the need for raw materials in battery production. Typically, the process includes sorting batteries by chemistry, dismantling them to extract individual cells, and then employing various techniques like shredding, pyrometallurgy, or hydrometallurgy to extract and purify valuable metals. Advanced recycling technologies are continually being developed to improve efficiency and sustainability in the recycling process, contributing to the circular economy of electric vehicle batteries.

The major global suppliers of EV Battery Recycling Services include Battery Recyclers of America, Battery Solutions, ACCUREC Recycling GmbH, American Manganese, LI-CYCLE CORP, G & P Service, Recupyl, Retrieval Technologies, SITRASA, SNAM S.A.S, Umicore, etc. The global players competition landscape in this report is divided into three tiers.
