Research Summary

EV (Electric Vehicle) PTC (Positive Temperature Coefficient) heaters are a type of electric heating system commonly used in electric vehicles to provide cabin heating during cold weather conditions. PTC heaters are energy-efficient and operate by passing an electric current through a heating element made of a PTC material, which has a characteristic of increasing its electrical resistance as it heats up. As the PTC material heats, it emits warm air into the vehicle's cabin to keep occupants comfortable. PTC heaters are favored for their quick response time, precise temperature control, and energy-saving features. They are a key component in electric vehicles, ensuring that passengers stay warm while minimizing the impact on the vehicle's overall energy consumption and range.
