### Research Summary

The EV Pyro-Fuse is a safety device used in electric vehicles (EVs) as part of their high-voltage battery systems. It is designed to protect the battery from overcurrent conditions or short circuits that could lead to thermal runaway or fire hazards. The pyro-fuse contains a small amount of explosive material that is triggered when an abnormal current or temperature threshold is reached. When activated, the pyro-fuse rapidly disconnects the battery from the vehicle's electrical system, isolating it from potential hazards. This quick action helps prevent further damage to the battery and reduces the risk of fire or explosion. The EV Pyro-Fuse is a critical safety component in electric vehicles, ensuring the reliability and safety of their battery systems.

The major global manufacturers of EV Pyro-Fuse include Autoliv, Daicel, Pacific Engineering Corporation (PEC), Littelfuse, Mersen, Eaton, Miba AG, MTA Group, Xi'an Sinofuse Electric, etc. The global players competition landscape in this report is divided into three tiers.
