Research Summary

Evaporative cooling pads for livestock barns are specialized cooling systems designed to create a comfortable and temperature-controlled environment for farm animals, particularly in hot and arid regions. These cooling pads consist of water-absorbing materials or cellulose pads installed on the walls or ventilation openings of the barn. Water is continuously circulated over the pads, and as air is drawn through them by fans, it is cooled through the process of evaporation. The cooled air is then distributed throughout the barn, providing a more comfortable and stress-reducing environment for the livestock. Evaporative cooling pads help regulate temperature and humidity levels, reducing heat stress in animals, which can improve their overall health, productivity, and well-being. These systems are commonly used in dairy farms, poultry houses, and other livestock operations to enhance animal comfort during periods of hot weather.
