Research Summary

Excimer lamps are specialized ultraviolet (UV) light sources that generate high-intensity, monochromatic UV radiation through the excitation of gas mixtures containing noble gases (such as xenon, krypton, or argon) and halogens. Unlike conventional UV lamps, excimer lamps operate without electrodes, using dielectric barrier discharge technology to produce UV wavelengths typically ranging from 172 nm to 308 nm. These lamps are widely used in applications such as surface sterilization, water purification, photolithography, and material processing, due to their ability to deliver precise, ozone-free UV radiation. Their long lifespan, energy efficiency, and environmental friendliness make excimer lamps an essential tool in industries requiring controlled UV exposure.

The major global manufacturers of Excimer Lamps include USHIO, Hamamatsu Photonics, ORC MANUFACTURING, WONIK QnC, Radium, SEN ENGINEERING, Excelitas Technologies, Foshan Dingmei Optoelectronics, First UVC, Resonance, Unilam, JK Lighting, GMY Lighting Technology, Shenzhen RM Technology, etc. The global players competition landscape in this report is divided into three tiers.
