### Research Summary

Expanded Beam Fiber Optic Connectors are a type of optical connector designed to provide reliable and rugged connections for fiber optic cables, even in challenging environmental conditions. Unlike traditional connectors, which use physical contact between the fiber cores, expanded beam connectors use lenses or optical elements to expand the optical signal before transmitting it over a small air gap to the receiving connector. This design minimizes the risk of contamination, damage, or misalignment of the delicate fiber cores, making expanded beam connectors highly durable and suitable for use in harsh environments, such as military, aerospace, and industrial applications. They offer robust optical performance, reduced maintenance requirements, and resistance to factors like dust, dirt, and moisture, ensuring reliable data transmission in demanding scenarios.

The major global manufacturers of Expanded Beam Fiber Optic Connectors include Amphenol, Molex, 3M, ODU GmbH & Co.KG, TE Connectivity, Sumitomo Electric
