Research Summary

Expanded Polypropylene (EPP) is a lightweight and versatile plastic foam material that is known for its exceptional energy absorption and impact resistance properties. It is created by expanding polypropylene resin beads using heat and pressure, resulting in a foam structure with closed cells. EPP exhibits excellent cushioning, insulation, and buoyancy characteristics, making it valuable for various applications, including protective packaging for fragile items, automotive components, sports equipment like helmets and padding, and even as insulation in construction. Its ability to withstand repeated impacts without significant deformation and its resistance to moisture, chemicals, and UV radiation make EPP a favored material in industries where durability and impact protection are paramount.

The major global manufacturers of Expanded Polypropylene include JSP, Kaneka, BASF, Hanwha, Bo Fan New Material, Wuxi Hi-Tec, Sinopec, etc. The global players competition landscape in this report is divided into three tiers.
