### Research Summary

Explosion panels, also known as explosion vents or explosion relief panels, are safety devices installed in industrial settings to mitigate the potentially catastrophic consequences of an explosion. These panels are typically designed as sections of a building or equipment enclosure that are deliberately weakened or fitted with special materials that can rupture or vent when exposed to an excessive pressure buildup caused by an explosion. By releasing the pressure and redirecting the force of the explosion away from the structure or equipment, explosion panels help prevent severe structural damage, reduce the risk of secondary explosions, and protect personnel and assets within the vicinity. Explosion panels are commonly used in industries where explosive materials or hazardous processes are present, such as chemical plants, refineries, and grain silos, as part of an overall safety strategy to minimize the impact of potential explosions.

The major global manufacturers of Explosion Panels include Fike, Vigilex, Elfab, BS&B Safety Systems, REMBE GmbH, ZOOK, DonadonSDD, Oseco, IEP Technologies,

Flowseal Engineering, Adix, ATEX, RSBP, FDC Co., Ltd, CS Explovent, CV Technology, etc. The global players competition landscape in this report is divided into three tiers.
