Research Summary

An external nasal dilator is a medical device designed to alleviate nasal congestion and improve airflow by mechanically opening the nostrils from the outside. It consists of a flexible adhesive strip that is applied to the exterior of the nose, with its ends attaching to each nostril's sidewalls. When the external nasal dilator is applied, it gently lifts and widens the nasal passages, reducing resistance to the airflow, and making it easier to breathe through the nose. These devices are commonly used by individuals who experience nasal congestion due to conditions like allergies, colds, or nighttime snoring, as well as by athletes seeking to enhance their breathing during physical activities. External nasal dilators are non-invasive and offer a simple and convenient way to improve nasal airflow and alleviate breathing difficulties.
