Research Summary

External wall insulation materials, also known as exterior insulation and finish systems (EIFS), are building materials used to thermally insulate the exterior walls of buildings and improve their energy efficiency. These materials are applied to the outer surface of the existing wall, typically as a layer of insulation boards or foam panels, followed by a reinforcing mesh and a weather-resistant finish coat. External wall insulation helps to reduce heat loss, maintain interior comfort, and lower energy consumption by creating a continuous thermal barrier on the outside of the building. It also enhances the building's aesthetics and can protect the structure from weathering and moisture. External wall insulation materials are commonly used in retrofitting existing buildings and in new construction projects, contributing to energy savings and sustainability in the construction industry.

The major global manufacturers of External Wall Insulation Material include Kingspan, Saint-Gobain, Knauf Insulation, Sto Ltd., Baunit, Rockwool, Dupont, Sedant Roba, Shanghai ABM Rock Wool, Feininger, Longsan Advanced Materials, Paroc Group,
