### Research Summary

Extruded activated carbon is a specialized form of activated carbon that has been manufactured into cylindrical or pellet-like shapes through a process called extrusion. It starts as granular activated carbon, which is derived from various carbon-rich materials like coconut shells, coal, or wood, and undergoes a controlled compression and shaping process. This results in uniform, high-density, and durable carbon pellets or cylinders with a consistent pore structure and large surface area. Extruded activated carbon is widely used in applications such as air and water purification, gas adsorption, and industrial processes, where its tailored shape and mechanical strength make it highly effective in removing impurities, pollutants, and contaminants from various fluids and gases.

The major global manufacturers of Extruded Activated Carbon include Kuraray, Datong Coal Jinding Activated Carbon, Ningxia Huahui Activated Carbon, Inner Mongolia Taixi Coal Group, China Energy Investment Corporation, Norit, Datong CRRC Coal Chemical, Ningxia Jinbaoxing Activated Carbon, DESOTEC Activated Carbon, Shanxi
