Research Summary

Fabric protection refers to the application of various treatments or coatings to textile materials, such as clothing, upholstery, or outdoor gear, to safeguard them against damage, stains, and premature wear. These protective treatments create a barrier on the fabric's surface, making it more resistant to spills, liquids, dirt, UV radiation, and other environmental factors that can harm or degrade the material. Fabric protection can be achieved through different methods, including the use of fabric sprays, coatings, or specialized finishes. By adding a layer of protection, fabric items become easier to clean, maintain their appearance, and have an extended lifespan, ultimately saving money and reducing the need for frequent replacements. Fabric protection is particularly valuable in preserving the aesthetics and functionality of textiles in various applications, including home furnishings, automotive interiors, and outdoor clothing.

The major global manufacturers of Fabric Protection include 3M (Scotchgard), RPM International (Guardian), Shield Industries (ForceField), Guardsman, Vectra, Actichem, Ultra-Guard, SC Johnson (KIWI), Chemical Guys, ProtectME, NANO-Z COATING,
