Research Summary

FAC lenses, or Free-Form Aspheric Curve lenses, are a type of advanced ophthalmic lens technology used in eyeglasses to provide high-quality vision correction. These lenses are customized to the wearer's specific prescription and visual needs by using computer-controlled surfacing equipment to create a precise, complex surface with varying curvatures across the lens. The aspheric design reduces optical aberrations, resulting in sharper, more natural vision with improved peripheral clarity and reduced distortion. FAC lenses are particularly beneficial for individuals with higher prescription strengths, as they offer thinner and lighter lenses with enhanced optics, reduced glare, and a more aesthetically pleasing appearance in their eyeglasses.
