Research Summary

Fat Filled Milk Powders (FFMP) are dairy-based ingredients commonly used in the food industry as a cost-effective alternative to whole milk powder. FFMP is made by blending skim milk powder with vegetable fats, typically palm oil or coconut oil, to achieve a desired fat content while maintaining the milk solids. This results in a dry milk powder with a similar taste and functional properties to whole milk powder but at a lower cost. FFMP can be used in a variety of food applications, including baked goods, confectionery, dairy products, and instant beverages, where it provides creaminess, texture, and flavor. However, it is essential to note that FFMP may not offer the same nutritional benefits as whole milk powder, as it contains added vegetable fats, which may affect the overall nutritional profile of the end product.
