Research Summary

Fat powders are finely processed, dry forms of fats or oils that are typically created by spray-drying, microencapsulation, or other techniques to convert liquid fats into a powder-like consistency. These powders maintain the nutritional properties and flavor of the original fat while offering the convenience and stability of a dry product. Fat powders are commonly used in the food and beverage industry for applications such as baking mixes, snack foods, dairy products, and powdered beverages, as they provide an easy way to incorporate fat into products without the need for refrigeration or liquid handling.
