Research Summary

Faux leather, also known as synthetic leather or leatherette, is a man-made material designed to mimic the appearance and texture of genuine leather. It is created by bonding a layer of plastic, such as polyurethane (PU) or polyvinyl chloride (PVC), to a fabric backing. Faux leather can closely resemble real leather in terms of look and feel, making it a popular and more affordable alternative to genuine leather in various applications, including furniture upholstery, clothing, footwear, and accessories. Faux leather is often chosen for its versatility, ease of maintenance, and ethical considerations, as it does not involve the use of animal hides. However, it may lack some of the natural characteristics and durability associated with real leather, and its quality can vary depending on the manufacturing process and materials used.

The major global manufacturers of Faux Leather include Du Pont, Kuraray, Toray, BASF, Teijin, Hexin Group, San Fang Chemical, Anli Group, Ultrafabrics, Willow Tex, SIMNU, etc. The global players competition landscape in this report is divided into three tiers.
