### Research Summary

FC BGA (Flip Chip Ball Grid Array) is a type of integrated circuit (IC) packaging technology used in the electronics industry to connect and protect semiconductor devices. In FC BGA, the silicon die (the actual semiconductor chip) is flipped upside down and mounted directly onto the package substrate. The electrical connections between the die and the substrate are established using tiny solder balls arranged in a grid pattern on the underside of the die. This arrangement allows for shorter electrical paths, reduced inductance, and better thermal performance compared to traditional wire-bonded packages. FC BGA is commonly used for high-performance microprocessors, memory chips, and other complex ICs, where efficient heat dissipation and high-speed electrical connections are crucial for reliable operation.

The major global manufacturers of FC BGA include Unimicron, Ibiden, Nan Ya PCB, Shinko Electric Industries, Kinsus Interconnect, AT&S, Semco, Kyocera, TOPPAN, Zhen Ding Technology, Daeduck Electronics, ASE Material, ACCESS, NCAP China, LG InnoTek, Shenzhen Fastprint Circuit Tech, Shennan Circuit, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises

global leading enterprises that command a substantial market share, hold a dominant industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
