Research Summary

Fe-Ni magnetic powder cores are specialized magnetic components used in various electronic and electrical applications, particularly in the field of electromagnetic interference (EMI) suppression and inductors. These cores are typically composed of a mixture of iron (Fe) and nickel (Ni) powders, which are compressed into a specific shape and then sintered to form a solid core. Fe-Ni magnetic powder cores are known for their excellent magnetic properties, including high magnetic permeability and low core loss, which make them highly effective at suppressing EMI and providing efficient energy storage in inductors. They are commonly used in electronic circuits, power supplies, transformers, and filters to control electromagnetic interference, improve signal quality, and manage energy efficiently.

The major global manufacturers of Fe-Ni Magnetic Powder Core include Chang Sung Corporation, MAGNETICS, Micrometals, Inc., Samwha Capacitor Group, KDM, Dongbu Electronic Materials, DMEGC, etc. The global players competition landscape in this report is divided into three tiers.
