Research Summary

Ferro vanadium is an alloy primarily composed of vanadium and iron, typically containing around 35-85% vanadium by weight. It is produced by reducing vanadium pentoxide (V_2O_5) with iron in an electric arc furnace. Ferro vanadium is widely used as an alloying agent in the steel industry to improve the properties of steel. It enhances steel's strength, hardness, and wear resistance, making it particularly valuable for applications requiring durability and toughness, such as in the production of high-strength steels used in construction, aerospace, and automotive manufacturing. Ferro vanadium is also utilized in the manufacturing of specialized alloys and materials, including those used in the aerospace and defense sectors, where its unique properties contribute to the development of lightweight yet strong and durable components.

The major global manufacturers of Ferro Vanadium include Pangang, EVRAZ, HBIS Chengsteel, Jinzhou Xinwanbo, AMG, Taiyo Koko, JFE Material, Hickman, Williams & Co, etc. The global players competition landscape in this report is divided into three tiers.
