### Research Summary

Ferrotitanium is an alloy primarily composed of titanium (Ti) and iron (Fe), with varying levels of carbon and other trace elements. It is produced by smelting or alloying processes that involve the reduction of titanium ores, typically ilmenite or rutile, with iron sources in electric arc furnaces. Ferrotitanium serves as an essential alloying agent in the steel and foundry industries, where it enhances the properties of steel and cast iron. It improves steel's strength, toughness, and corrosion resistance, making it valuable in the production of various steel grades used in aerospace, automotive, and construction applications. Ferrotitanium is also used in the foundry industry to refine the microstructure of cast iron, reducing the risk of shrinkage and defects in castings. Its versatility and ability to impart specific characteristics to alloys make ferrotitanium a critical component in many industrial processes.

The major global manufacturers of Ferrotitanium include Global Titanium, AMG Superalloys UK, Arconic, Metalliage, VSMPO-AVISMA, Kluchevskiy Ferroalloy Plant, Mottram, Cronimet, ZTMC, Bansal Brothers, OSAKA Titanium, Guotai Industrial,

Hengtai Special Alloy, Jinzhou Guangda Ferroalloy, etc. The global players competition landscape in this report is divided into three tiers.
