### Research Summary

A fever cooling patch, also known as a fever reducing patch or cooling gel patch, is a medical device designed to help lower body temperature in individuals experiencing fever or heat-related discomfort. These patches typically consist of a soft, flexible backing material infused with a cooling gel or menthol-based formulation. When applied to the skin, the patch releases a cooling sensation that helps to dissipate heat from the body, providing relief from fever symptoms such as elevated body temperature, discomfort, and sweating. Fever cooling patches are often used in children and adults as a non-invasive and convenient method to manage fever without the need for oral medications or physical cooling methods like cold compresses. They are commonly used during fever episodes, hot weather, or in situations where access to traditional cooling methods may be limited. It is important to follow the manufacturer's instructions for proper use and duration of application when using fever cooling patches.

The major global manufacturers of Fever Cooling Patch include Kobayashi Pharmaceutical, Hisamitsu Pharmaceutical, Pigeon, New Tac Kasei, Sato
