Research Summary

A FIBC conductive bag, also known as a type C or conductive bulk bag, is a specialized Flexible Intermediate Bulk Container designed to safely handle and transport combustible or flammable materials in environments where electrostatic discharges pose a potential hazard. These bags are constructed with conductive materials, typically woven with carbon threads, to provide a pathway for the dissipation of static electricity. By preventing the buildup of electrostatic charges, FIBC conductive bags reduce the risk of sparks that could ignite flammable dust or gases during the filling, handling, or transportation process. They are widely used in industries such as chemicals, pharmaceuticals, and agriculture, where the control of electrostatic discharge is essential for safety compliance and fire prevention in potentially explosive atmospheres.
