Research Summary

Fiber for melt-blown nonwoven fabrics refers to the specialized synthetic fibers used in the production of melt-blown nonwoven materials, a type of fabric made through a unique manufacturing process called melt blowing. These fibers are typically made from polymers like polypropylene, polyethylene, or polyester, which are melted and extruded through tiny nozzles into high-velocity hot air streams. The intense air turbulence breaks down the molten polymer into micro-sized fibers that are then collected on a conveyor to form a nonwoven fabric. Melt-blown nonwovens are known for their fine fiber diameters, high filtration efficiency, and versatility, making them valuable in various applications, including filtration media for masks and respirators, liquid filtration, oil absorption materials, and more. The choice of fiber type and quality plays a critical role in determining the performance characteristics of the resulting melt-blown nonwoven fabric.

The major global manufacturers of Fiber for Melt-Blown Nonwoven Fabrics include
