Research Summary

Fiber ceramic, often referred to as ceramic fiber or refractory ceramic fiber (RCF), is a high-temperature insulation material made from extremely fine and heat-resistant fibers, typically alumina-silica-based or composed of other ceramic compounds. These fibers are processed and formed into blankets, boards, papers, textiles, or other shapes and configurations used in various industrial and thermal insulation applications. Fiber ceramics exhibit excellent insulating properties, with high-temperature resistance, low thermal conductivity, and lightweight characteristics. They are commonly used to line industrial furnaces, kilns, and ovens, providing thermal insulation and enhancing energy efficiency in high-temperature processes while withstanding extreme heat and thermal shock. Fiber ceramics are also employed in the aerospace, automotive, and metallurgical industries, among others, for their ability to protect against high temperatures and to provide fire-resistant and thermal insulation solutions.

The major global manufacturers of Fiber Ceramic include Morgan Thermal Ceramics, Unifrax, Nutec, Ibiden, Isolite Insulating Products, Luyang Energy-Saving Materials,

Hongyang Refractory Materials, Rath, Yeso Insulating Products, etc. The global players competition landscape in this report is divided into three tiers.
