Research Summary

A fiber converter, also known as a media converter, is a networking device used to convert data signals between different types of network media or transmission technologies. Typically, fiber converters operate by converting electrical signals from copper cables (e.g., twisted-pair cables like Ethernet) into optical signals suitable for transmission over fiber optic cables and vice versa. This allows for the extension of network connections beyond the typical distance limitations of copper cables while taking advantage of the speed and security benefits of optical fiber. Fiber converters are commonly used in telecommunications, data centers, and industrial networks to bridge the gap between copper and fiber optic technologies, enabling seamless communication between devices connected to different types of network media.

The major global manufacturers of Fiber Converter include Siemens, Red Lion Controls, Weidm?ller, Hirschmann, Phoenix, Advantech, Moxa, Kyland, Oring, EtherWAN, Korenix, Meinberg, FiberPlex, Huahuan, Raisecom, etc. The global players competition landscape in this report is divided into three tiers.
