### Research Summary

Fiber media converters are networking devices used to facilitate the seamless integration of different network media types, such as copper and fiber optic cables. These devices are designed to convert data signals from one transmission technology or media type to another. For example, they can convert electrical signals from twisted-pair copper cables (e.g., Ethernet) into optical signals suitable for transmission over fiber optic cables, and vice versa. Fiber media converters are commonly used in network environments where the coexistence of different media types is necessary, enabling the extension of network connections beyond the typical distance limitations of copper cabling while taking advantage of the speed, security, and bandwidth benefits of fiber optic technology. They play a vital role in bridging the gap between various network components and ensuring smooth communication in diverse network architectures.

The major global manufacturers of Fiber Media Converters include TP-Link, Phoenix Contact, Belden, SI Tech, Inc., ADFweb, MPL, Firecomms, VERSITRON, OPTCORE,
