### Research Summary

Fiber optic bundles, also known as fiber optic assemblies or fiber optic harnesses, are specialized optical cables comprised of multiple individual optical fibers bundled together within a protective sheath. These bundles are designed to transmit optical signals, such as light or laser-generated signals, for various applications in industries like telecommunications, medical imaging, endoscopy, and industrial sensing. Each fiber within the bundle carries its own data or signal, and they are typically arranged in a specific pattern or configuration to achieve desired performance characteristics, such as improved light transmission or flexibility. Fiber optic bundles offer advantages such as high bandwidth, immunity to electromagnetic interference, and the ability to transmit data over long distances with minimal signal loss. They are used in scenarios where the multiplexing or combining of optical signals is required, making them essential components in many optical systems and instruments.

The major global manufacturers of Fiber Optic Bundles include Le Verre Fluor?, Mitsubishi Cable, SQS Vlaknova Optika, Molex, Sumitomo Electric Lightwave, LEONI,
